How?

How do astronauts get back to Earth?

How do planets stay up in space?

How does the Moon shine?

The Sun appears around 400,000 times brighter than the Moon.

How many stars are there?

How far can you go in space?

How many people have been to the Moon?

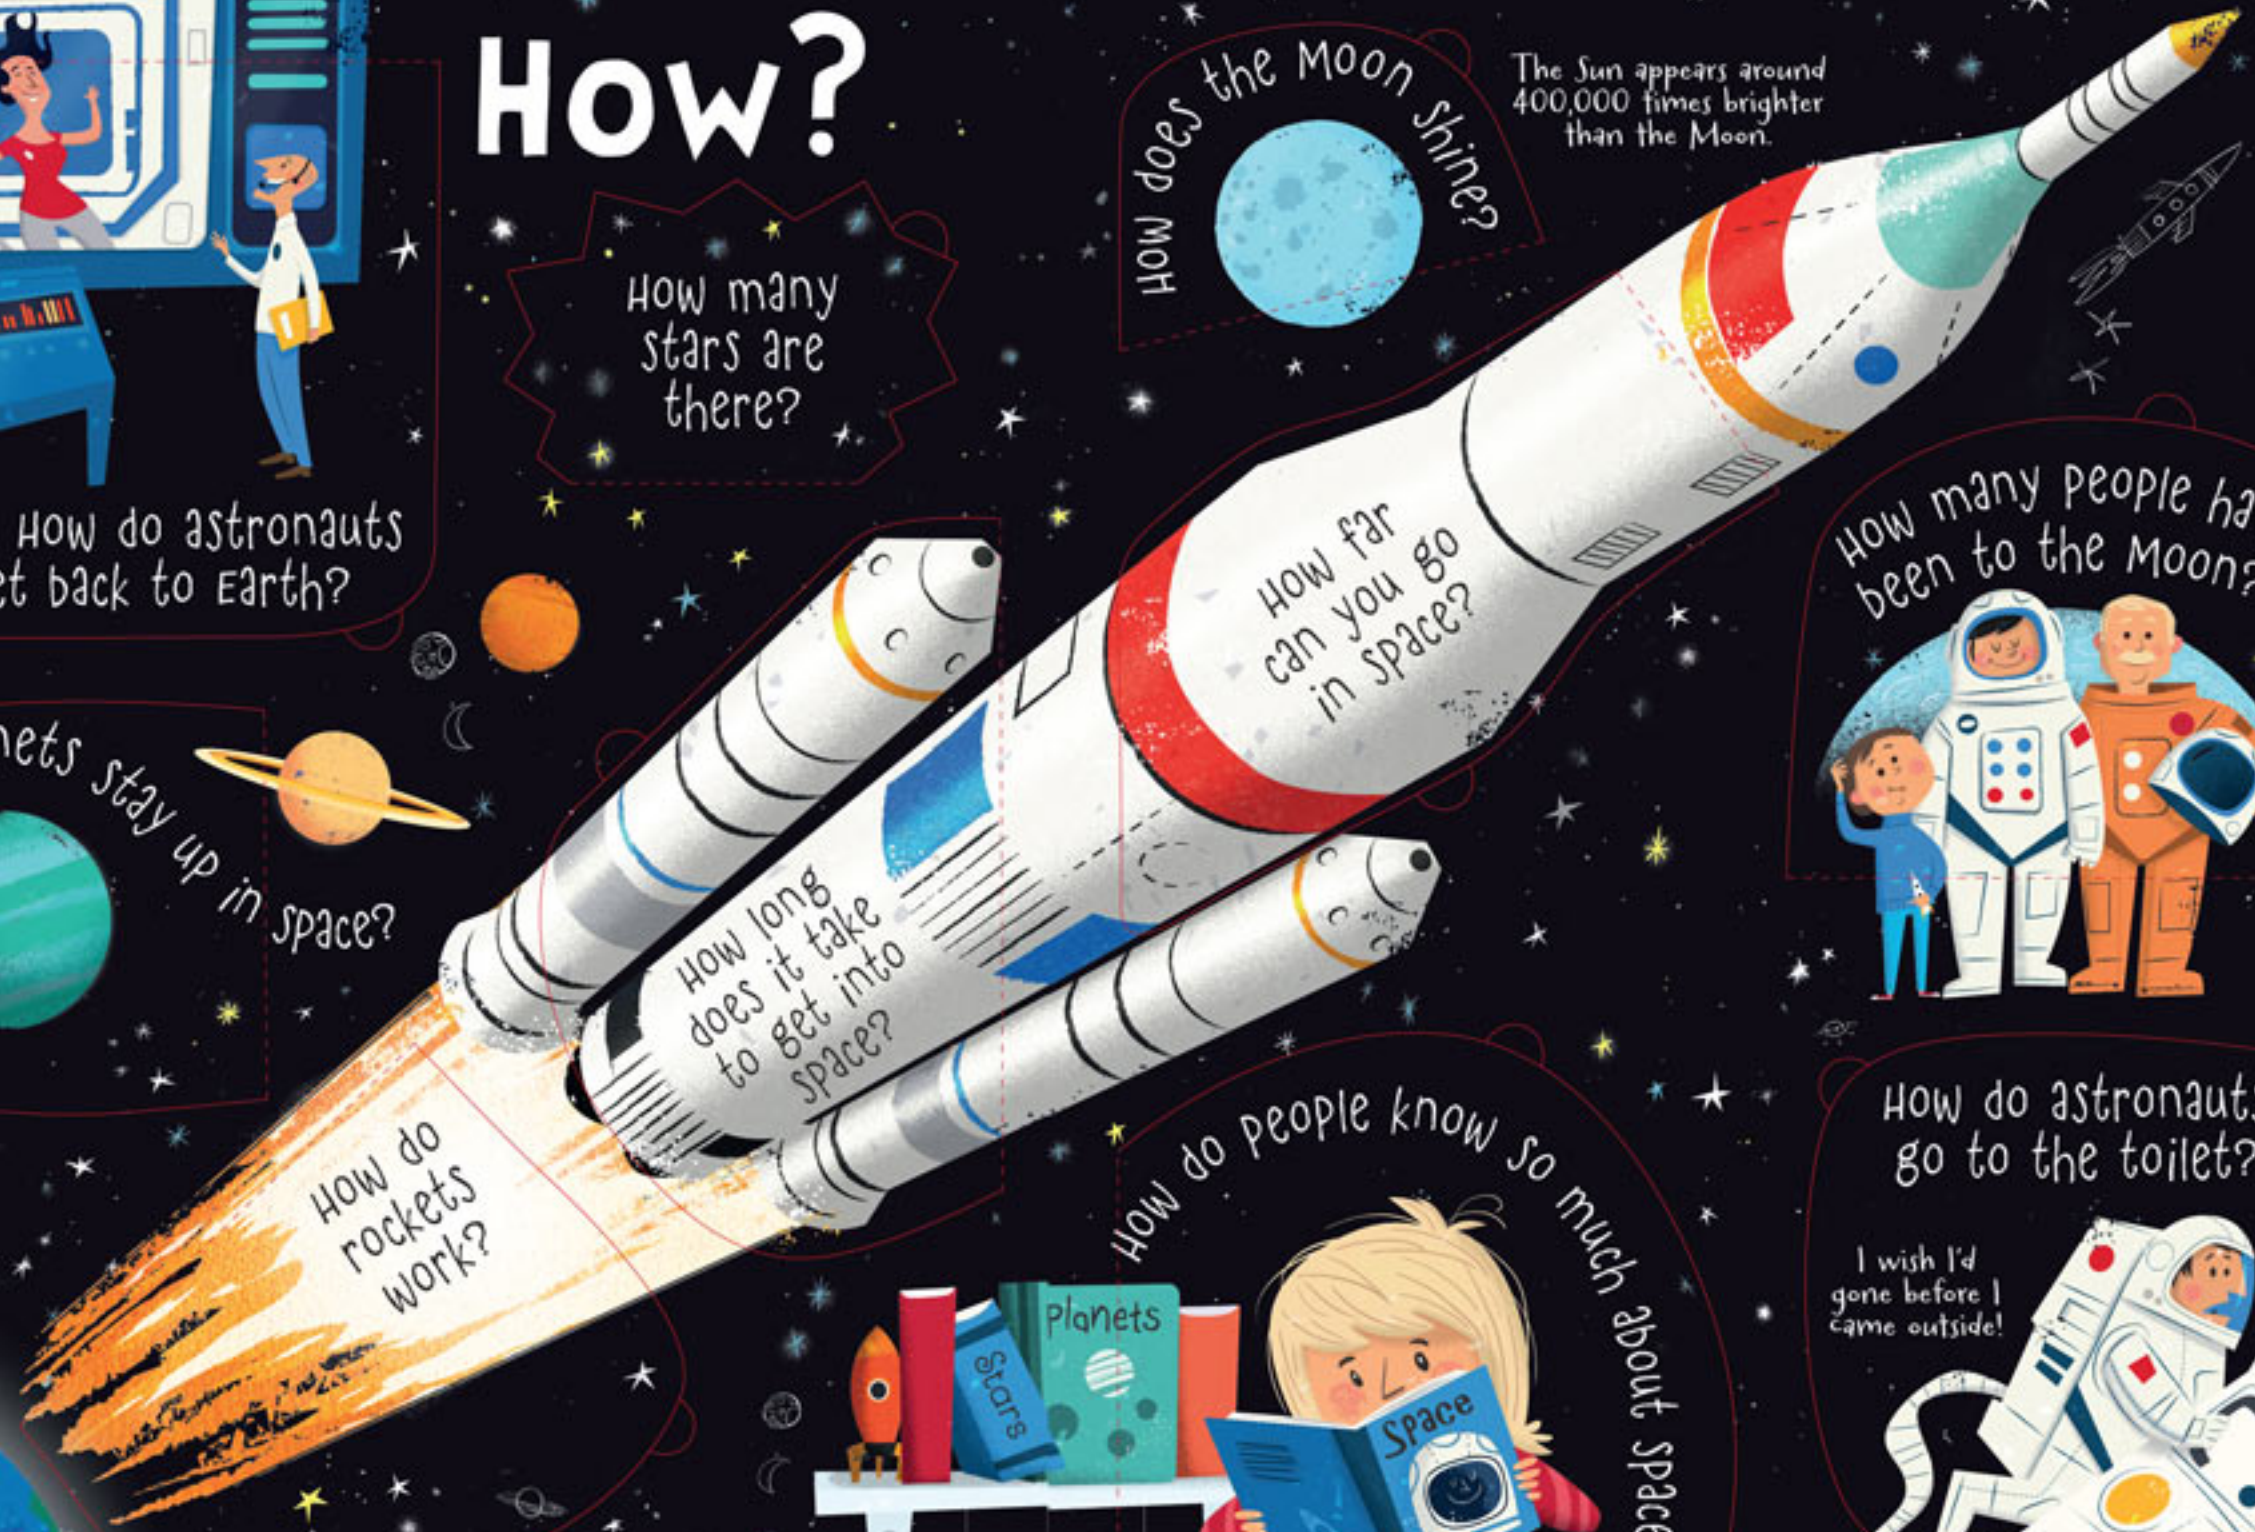

How long does it take to get into space?

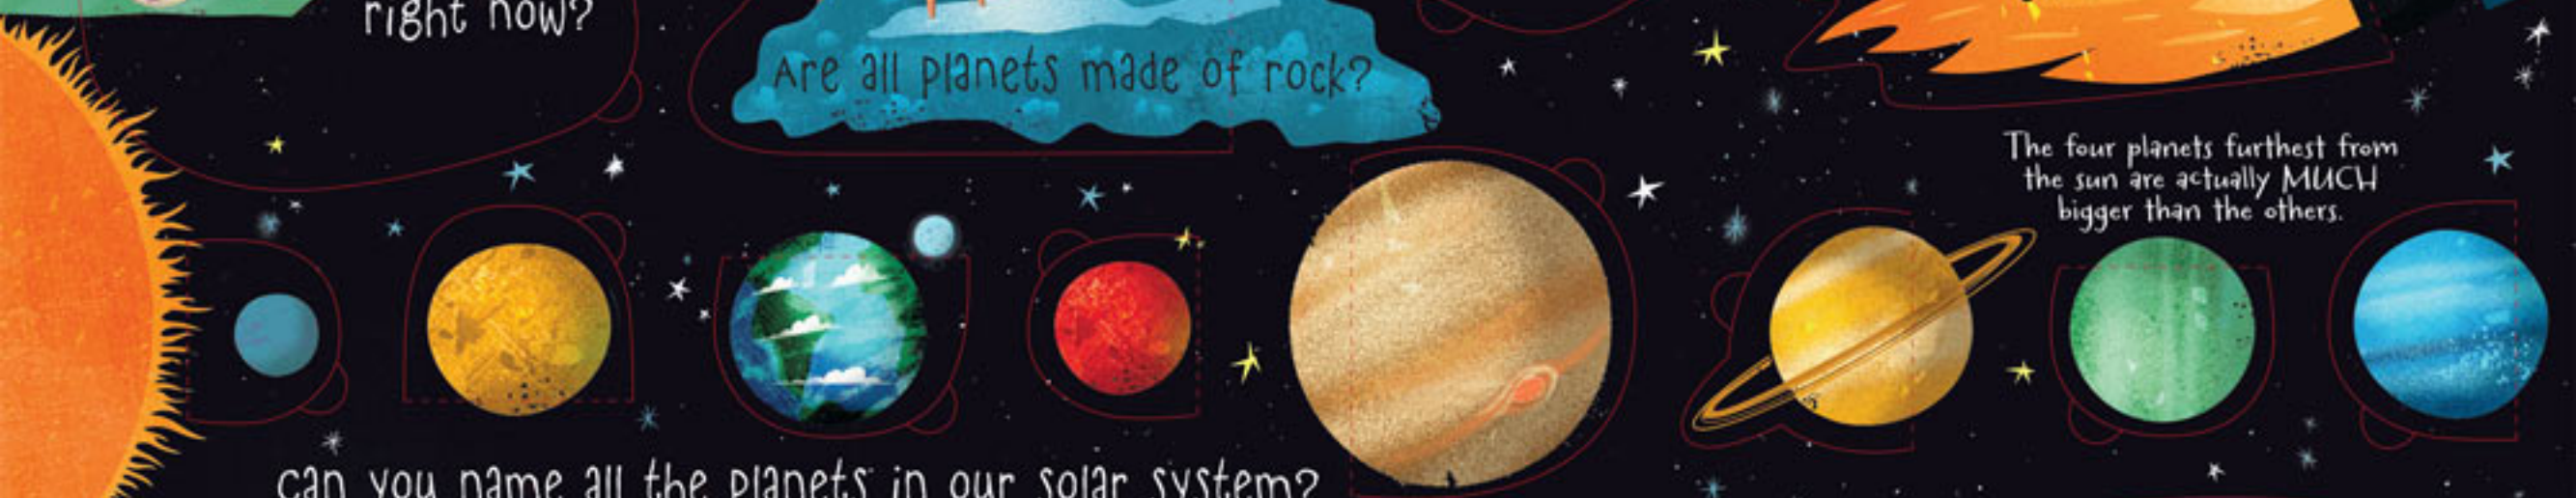

How do people know so much about space?

How do astronauts go to the toilet?

I wish I'd gone before I came outside!

Yes or no?

The four planets furthest from the sun are actually MUCH bigger than the others.
