# OTHER NINJA RESOURCES FOR TEACHERS

## FOR TEACHERS

### TIMES TABLE NINJA

BY SARAH FARRELL AND ANDREW JENNINGS

A treasure trove of photocopiable multiplication worksheets that give Key Stage 2 pupils all the tools they need to gain fluency in multiplication and division up to their 12 times tables. Each chapter begins with exercises for practising rapid recall, followed by visually engaging activities for applying knowledge to other areas of maths including shape, perimeter, scale factors, fractions and more.

### VOCABULARY NINJA

A practical guide featuring strategies and photocopiable activities to help transform pupils into vocabulary ninjas. With easy-to-follow theory and teaching approaches, as well as key curriculum topic vocabulary, etymology and phrases, this book will help bring the primary curriculum to life.

## FOR CHILDREN

### WRITE LIKE A NINJA

A pocket-sized book packed full of all the grammar, vocabulary and sentence structures that children need in order to improve and develop their writing skills. Fully aligned to the Key Stage 2 National Curriculum, this book is designed to be used independently by pupils both in the classroom and at home.

### BE A MATHS NINJA

*Be a Maths Ninja* is jam-packed with key concepts, mathematical vocabulary and practice advice to support every child's growing independence in maths. It covers all the key areas of the National Curriculum for Key Stage 2 and is perfect for children needing all the important maths facts at their fingertips.

Head to [www.vocabularyninja.co.uk](http://www.vocabularyninja.co.uk) and follow @VocabularyNinja on Twitter for more teaching and learning resources to support the teaching of vocabulary, reading, writing and the wider primary curriculum.

### COMPREHENSION NINJA FICTION & POETRY

A set of six books for ages 5–11 that provide strategies and carefully curated resources to teach the key comprehension skills of skimming, scanning and retrieving information effectively. Each book curates 24 high-quality fiction or poetry texts by authors such as Roald Dahl, Katherine Rundell and Chitra Soundar, alongside photocopiable activities with strong links to the National Curriculum.

### COMPREHENSION NINJA NON-FICTION

A set of six books for ages 5–11 that provide strategies and carefully curated resources to teach the key comprehension skills of skimming, scanning and retrieving information effectively. Each book presents 24 high-quality non-fiction texts and photocopiable activities with strong links to the National Curriculum.

# INTRODUCTION

Arithmetic is the study of a core part of mathematics that involves the varied properties of numbers and how they can be manipulated using the four operations: addition, subtraction, multiplication and division. A pupil's ability to confidently calculate using the four operations is essential as it underpins their ability to access the reasoning and mastery objectives set out by the primary National Curriculum.

## HOW DOES ARITHMETIC NINJA SUPPORT TEACHERS AND SCHOOLS?

Arithmetic Ninja has been created to support the daily planning, preparation, teaching and assessment of arithmetic throughout each year group and across the whole school from Year 1 to Year 6. Each book contains almost 6,000 arithmetic-style questions and word problems that have been tailored to meet the needs of the primary National Curriculum, meaning that high-quality, whole-school arithmetic teaching and learning can be consistently and effectively embedded within each classroom without any of the time-consuming preparation. It's teaching simplified, learning amplified. Arithmetic Ninja is another outstanding whole-school resource that embodies the Vocabulary Ninja principles of simplicity, consistency and marginal gains!

## HOW TO USE THIS BOOK

Arithmetic Ninja is much more than just a series of age-related arithmetic questions. Each day provides three differentiated sets of ten questions. Grasshopper, Shinobi and Grand Master each have a specific focus and purpose to support all pupils in the modern primary classroom.

### GRASSHOPPER – CATCH-UP AND KEEP UP

Grasshopper questions have been designed to support pupils who are not working at the expected standard of their year group and require daily opportunities for repeated practice within a standard mathematical representation of part + part = whole ( $10 + 4 = 14$ ). Grasshopper questions provide opportunities to build confidence in

content from three half-terms prior to the age-related expectation. So, questions in the Spring 2 term will include content from Autumn 2, Spring 1 and Spring 2, allowing pupils to not only catch-up, but keep up too!

### SHINOBI – BUILD LINKS AND MAKE CONNECTIONS

Shinobi questions have been created beyond the standard age-related expectation for arithmetic questions. The focus at the Shinobi level is to provide an age-appropriate arithmetic resource – one that provides regular opportunities for pupils to build links and make connections between related mathematical facts. Within the daily series of ten questions, questions have been carefully crafted to allow pupils to make cognitive links between related facts. For example,  $9 \times 8 = 72$  and within the Shinobi series, subsequent questions may focus on  $0.8 \times 9$ ,  $7.2 \div 9$  or even  $0.9 \times 0.8$ . Where possible, the Shinobi strand provides teachers with the mathematical opportunities to dive deeper into a pupil's understanding with effective questioning to support the link-building process and to make these crucial connections.

### GRAND MASTER – VARIED FLUENCY, REPRESENTATION AND MASTERY

Grand Master questions provide pupils with a greater level of challenge, with questions bridging into mathematical content up to three half-terms beyond the age-related expectation. So, questions in the Autumn 2 term could also contain content from Spring 1 and Spring 2. Grand Master questions go even further still by presenting questions with varied representations such as whole = part + part ( $200 = 160 + 40$ ) or questions with unknown parts ( $200 = \_ + 40$ ). Grand Master questions allow teachers to provide a greater level of challenge for pupils who are ready for it and are designed to provide opportunities for pupils to develop a mastery level of mathematical understanding.

Each Arithmetic Ninja book is an extremely versatile resource for teachers, schools and tutors and could be used to begin daily maths lessons, as part of high-quality intervention, within private tuition or even as part of regular homework provision.
